MERCOL DRY MORTAR – PRODUCT INTEGRITY NOTICE

Only Add Water To Mercol Dry Mortar Products.

Important – Do Not Add Any Additional Materials.

Mercol dry mortar products are manufactured to a specific formulation to achieve the required **colour consistency, strength, workability and overall performance**.

No additional materials, additives, pigments, cement, sand, lime water-reducing agents, accelerators, retarders or other products should be added to Mercol dry mortar products.

If the mortar starts to stiffen we suggest turning it over as it can bring the mortar back to life before adding water.

Adding any additional material can alter the carefully balanced formulation and may compromise:

- **Colour consistency and appearance**
- **Compressive and bond strength**
- **Workability and application characteristics**
- **Curing and setting characteristics**
- **Durability and overall product performance**

Mercol's product performance and quality assurance apply to the product **as manufactured and supplied by Mercol and when used in accordance with our product instructions and applicable technical documentation**.

If any material is added to the product without prior written approval from Mercol, the resulting mixture is no longer the product manufactured and supplied by Mercol.

Mercol Pty Ltd accepts no responsibility or liability for any change in colour, strength, performance, appearance, durability or other characteristics resulting from the addition of any unauthorised materials to our products.

If you believe an adjustment to the product is required for a particular application, **please contact Mercol**.

Please protect the integrity of the Mercol product – use as supplied.
